

1000 CODE SNIPPETS

FOR FRONT-END DEVELOPMENT
PART - 1

@frontend_in_depth

Finding operating system details.

Did you know you could find operating system details using simple JS?

```
console.log(navigator.platform);
```

Preventing the page from Refreshing

Void(0) is used to prevent the page from refreshing. This will be helpful to eliminate the unwanted effects because it will return the undefined primitive value.

```
<a href="JavaScript:void(0);" onclick="alert('Well done!')">  
Click Me!  
</a>
```

Redirecting new page.

In vanilla JavaScript, you can redirect the user to a new page by setting the href property of the location object, which is a property of the window object.

```
function redirect() {  
  window.location.href = "newPage.html";  
}
```

Getting the current URL

Yes, it's possible with only JavaScript!
You can use `window.location.href` to both
get the current URL and update the URL.

```
console.log("location.href", window.location.href); // Returns full URL
```

Disable Right Click

The right click on the page can be disabled by returning false from the oncontextmenu attribute on the body element.

```
<body oncontextmenu="return false;"></body>
```

Detecting a mobile browser using regex.

```
function detectmob() {  
  if (  
    navigator.userAgent.match(/Android/i) ||  
    navigator.userAgent.match(/webOS/i) ||  
    navigator.userAgent.match(/iPhone/i) ||  
    navigator.userAgent.match(/iPad/i) ||  
    navigator.userAgent.match(/iPod/i) ||  
    navigator.userAgent.match(/BlackBerry/i) ||  
    navigator.userAgent.match(/Windows Phone/i)  
  ) {  
    return true;  
  } else {  
    return false;  
  }  
}
```

Copy to clipboard

You can use the Clipboard' API to create the "Copy to clipboard" functionality:

```
function copyToClipboard(text) {  
  navigator.clipboard.writeText(text);  
}
```

Go Back Button

Use the 'history.back()' to create a
"Go Back" button

```
<button onclick="history.back()">  
Go back  
</button>
```

DO YOU WANT PART – 2 ??

If this post gets 50+ comments, for next part, we will continue this series up to 1000 Code snippets in the next parts.
